Iker Antonio

# What is GitHub?

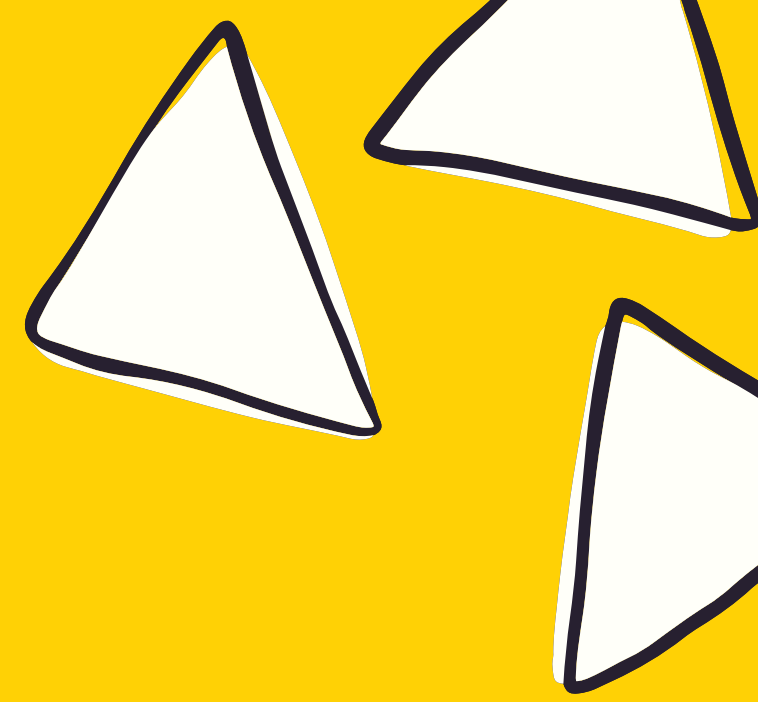

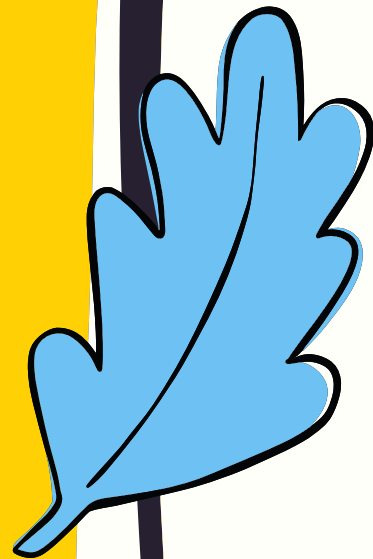

GitHub is a platform for hosting software projects and collaborating on their development using Git. It allows developers to work together, track code changes, and manage issues.

# What is GitHub for?

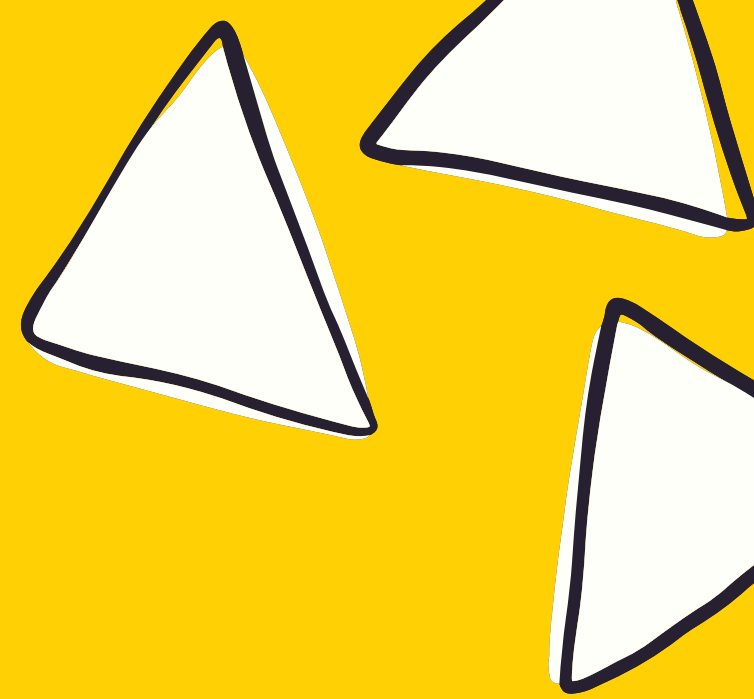

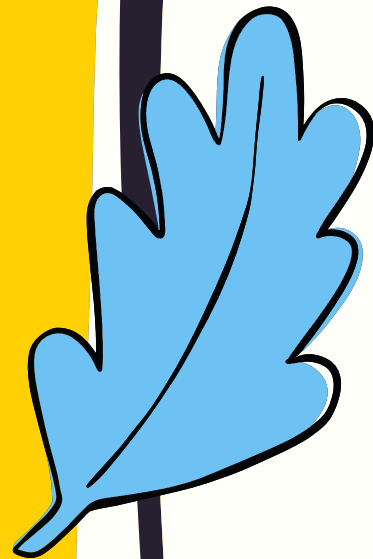

GitHub is a platform that allows developers to work together on software projects, version control code, manage tasks and issues, and automate development and deployment processes.

# Who created GitHub?

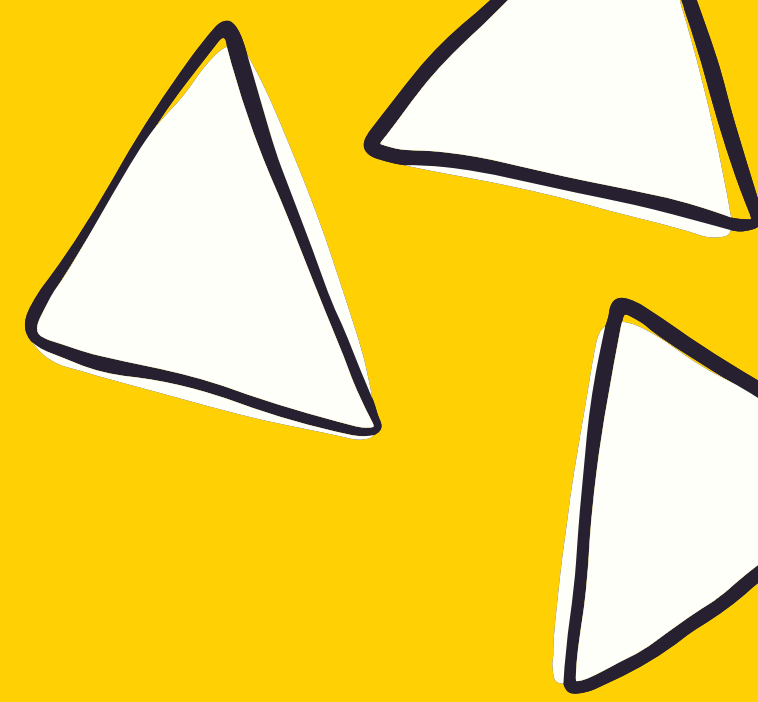

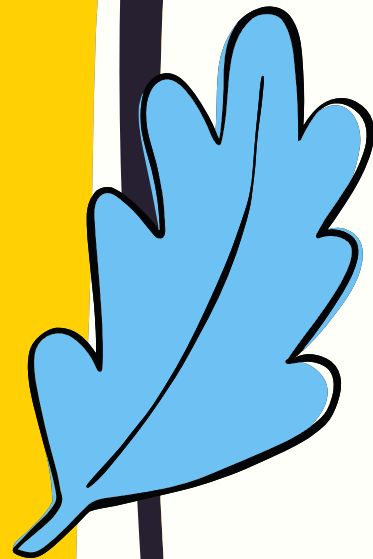

GitHub was created by  
Chris Wanstrath, Tom  
Preston-Werner, PJ  
Hyett and Scott Chacon  
in 2008. The platform  
was publicly launched in  
April of that same year.

# Why was GitHub created?

GitHub se creó para mejorar la colaboración en proyectos de software al ofrecer una plataforma que aprovecha Git para el control de versiones y facilitar la gestión y colaboración en proyectos de desarrollo.

The background is a solid yellow color. In the top-left corner, there is a white curved shape with a dark blue outline. In the top-right corner, there are three white triangles with dark blue outlines. In the bottom-left corner, there are three white triangles with dark blue outlines. In the bottom-right corner, there is a white curved shape with a dark blue outline.

**THANK YOU**
